

GITOQLOK

v2.9.98

July 23, 2026

Timestamps arrive in the read-only diff viewer, alongside fixes for a floating error when you change commit and for load-script-only commits from the popup.

WHAT'S NEW

Read-Only Timestamps

The diff viewer now shows timestamps in read-only mode, so you can see when each side of a comparison was captured while simply reading a diff.

FIXES

- Fixed a floating diff viewer error when changing commit.
- Popup local changes: fixed load script only commit behaviour.
