

GITOQLOK

v3.0.0

August 17, 2026

Version dates in the diff viewer and the script diff editor now show in your own local time, and a new button generates a tenant health report without leaving the extension.

WHAT'S NEW

Local Timestamps

Version dates in the diff viewer and the load script diff editor now display in your own local time, so reading when a commit was made no longer means converting time zones.

Tenant Health Report

A new button generates a tenant health report from inside the extension.

FIX

- Load script editor: fixed a hidden horizontal scrollbar when the Gitoqlok Helper is enabled.
