

Small comforts in the popup and the side panel: a font size control that both remember, a What's new dialog that shows up in the side panel too, and a side panel that opens the moment you make it the default. When the page stops answering, you now get one clear dialog instead of a stack of errors.

WHAT'S NEW

Font Size

A new Font size item in the ? menu of the popup and the side panel steps the text from 80% to 160%. The choice is remembered and shared between the two, so you set it once.

What's New

The What's new dialog after an update now appears in the side panel as well as the popup, with a new look.

Side Panel Default

With Use Side Panel by default on, the side panel now opens right after the extension is enabled, reloaded or updated. It used to take a tab switch or re-ticking the option before the popup gave way.

Lost Connection

When there is no connection to the page, because it was reloaded or the extension was updated, only the No connection to the page dialog is shown. Nothing loads and no error messages pile up on top of it until you refresh the page.

FIXES

- Clearer error messages when the page does not answer.
- UI options: the Open in Popup / Side panel hint now mentions Qlik and Power BI pages.
