

QSDA PRO

v3.7.1

July 27, 2026

You can now test an SSL configuration from the service status page where you were already reviewing it; a project settings menu fix and a precautionary patch to a Microsoft authentication package go with it.

WHAT'S NEW

SSL Test

Added an SSL Test column to the service status SSL page, so an SSL configuration can be tested from the page where it is reviewed.

FIXES

- Fixed the Help and Utilities menu items disappearing on the project settings page.
- Patched a published security vulnerability in a Microsoft authentication package. There is no evidence it could be exploited within QSDA Pro; the patch follows industry best practice.
