

Import gets the spotlight: a load script can now be pulled in from another Soterre application instead of copied across by hand. Timestamps show up in the read-only diff viewer, Lifecycle Insights has had a round of interface work, and a floating diff viewer error when changing version is fixed.

#### WHAT'S NEW

---

##### **Script Import**

The Import tab can now pull a load script in from another Soterre application, so a script that already exists elsewhere can be reused without copying it out by hand.

##### **Read-Only Timestamps**

The diff viewer now shows timestamps in read-only mode, so you can see when each side of a comparison was captured while simply reading a diff.

##### **Lifecycle Insights**

The Lifecycle Insights interface has had a round of improvements.

#### FIX

---

- Fixed a floating diff viewer error when changing version.
