

MotioCAP At a Glance

When your company's standard authentication source is not on the supported list for Cognos Analytics or Planning Analytics, MotioCAP can solve the integration challenges between the two systems. Common non-supported authentication sources we solve for:

- Custom relational tables
- Single Sign On between systems
- Custom Web Services
- SAML
- Multi-factor authentication
- Security schema of ERP (ex: SAP, PeopleSoft)

Avoid Security Risks

When it comes to integrating your security and authentication with Cognos and all of the data it makes available, you can't afford to take shortcuts. No one can afford the possible consequences of a data or security breach.

Motio has implemented Cognos Custom Authentication Providers for the most demanding clients from industries with the most stringent security requirements. We've worked with military, academic institutions, publicly traded financial institutions, and healthcare organizations to ensure the authentication source required to be used for Cognos meets their needs and the requirements of the Cognos system.

Ongoing Support

Motio frees you from finding the right developers, the time, and the effort required to build and maintain the integration as Cognos releases new versions. MotioCAP and SAML frameworks ensure that your integration is done correctly and efficiently to avoid knowledge gaps in how Cognos works with security. MotioCAP reduces the total design and implementation time by up to 90% so you can keep projects on track. Save time and effort, and be safe and secure, by choosing MotioCAP for your authentication needs in Cognos.
