

# Trusted and Optimized Qlik Sense® Environments

## Soterre for Qlik Sense® Product Sheet

### Soterre for Qlik Provides:

- Zero-touch Version Control
- Ticket System Integration
- Embedded Rollback
- Merging Apps & Sheets
- Continuous Deployment
- Build, Review, Document & Deploy Changes
- Full Audit Trail
- Analytics over Analytics

*Soterre has proven to be in-valuable to us and has quite literally "saved our bacon" on a couple of occasions when we thought we'd irretrievably lost apps or sheets from our live environment. One of the main selling features for us was the fact Soterre allows us to restore app specific elements i.e. tables, KPI's & even bookmarks in an app. In a nutshell, Soterre has been a huge asset to Vygon UK and one that has given us a tangible ROI within the first year! Highly recommended software.*

- Mark Allen, Vygon

Get There With Soterre

### DevOps: Key to Your Qlik Sense Development

Business intelligence teams adopt a DevOps delivery strategy for their ability to handle growing responsibilities. For CI/CD practices to work, proper documentation and backups are vital to maintaining production cycles. Rapid and frequent change requests mean things can go wrong and, when they do, being able to revert is crucial.

### Zero-Touch Version Control Streamlines Your Development

Without change management and version control, your delivery schedule can easily become hindered. Motio's Soterre supports the DevOps lifecycle by continuously monitoring your Qlik environment for changes and versioning content in the background, without impeding your development process. Track all changes over time and revert individual changes as needed. Soterre can also merge changes from multiple versions seamlessly via its tagging capability, meaning changes from numerous users or multiple edits can be brought together, collaboratively.

# Trusted and Optimized Qlik Sense® Environments

## Soterre for Qlik Sense® Product Sheet

### After Implementing Soterre You Will:

- Capture Development Knowledge
- Obtain Faster Delivery
- Reduce Development Efforts
- Improve Quality
- Enhance Management & Controls

*"To create an app for a new client in a development environment and deploy it to production, has gone from a day to an hour (using Soterre)."*

- Jan-Willem van Essen, Baker Tilly

*"Because of Soterre, I am no longer restrained by administrative tasks and creating unscheduled backups. This enables me to focus on how I can empower people every day. And you can't put a price tag on that."*

- Sean Bruton, VTCT

*"It's nice to have Soterre there as a safeguard so if we need to roll something back quickly we can, all without having to go through version-controlled scripts to figure out what changed and when. The amount of time we're saving percentage-wise is a huge number."*

- Ryan Buschert, RAS

### Soterre Creates an Automated Continuous Delivery Process

Soterre also supports your BI strategy by automating the delivery process. With Soterre, users can easily schedule delivery and move content between environments. No more copying files or providing server access!

Without automation through tooling, DevOps practices are restricted. Soterre protects the lifecycle, eliminating unnecessary risk and streamlining deployment processes along the way.

### Apply BI Analytic Principles to Your Own Qlik Development

A Qlik development team has targets. They have KPIs and need dashboards to monitor their progress. In other words, they need Qlik Sense to manage their processes and workflows. Soterre equips Qlik apps that contain all the needed information.

### All of this makes you Audit Ready

Implementing CI/CD with Soterre creates an environment that is audit ready without additional effort. You're able to answer any questions whether they come from internal auditors or external regulators.
