CLEAN UP YOUR QLIK APPS

QSDA Pro helps you quickly and easily identify issues and errors in your Qlik Sense applications so you deliver cleaner, leaner, faster apps. **Go Pro. Go faster.**

PRO GRADE ANALYSIS

Fast, clear, and simple, QSDA Pro scans every corner of your public and private sheets. It finds in seconds what used to take hours.

QSDA Pro helps you produce cleaner, leaner and faster apps by identifying:

Unused resources, such as fields, that can be removed.

Errors such as missing fields, syntax errors or missing key values.

Bad practices and recommendations on how to remediate.

Highlight performance hotspots.

QSDA Pro tests all object calculation times for you, ensuring you catch any performance problems before ever hitting production.

Undiscovered errors, calculated dimensions, nested AGGRs, sluggish operations – they pile up as your apps grow. A QSDA scan finds errors, missing elements, and bad practices, then lays them out in a simple dashboard and recommends ways to remediate.

QSDA Pro can analyze apps hosted in Qlik Sense® Enterprise, Qlik Cloud®, and Qlik Sense Desktop.

The original Document Analyzer is used every day by thousands of developers to deploy maintainable, scalable Qlik apps. Built on feedback from hundreds of users, QSDA Pro is this powerful tool's next generation.

QSDA PRO – FASTER, EASIER, BETTER
Find the bloat. Identify the bottlenecks. Be a hero.
