ReportCard

Proactive Alerting To Help Your Team Identify And Solve Issues

ABOUT REPORTCARD

ReportCard is an essential tool for understanding a company's Cognos performance issues at the source. It monitors and records your Cognos activity and performance, and alerts you to potential issues before they affect end-users.

Avoid outages: real-time alerts

Insight into issues

Discern Cognos performance

REAL-TIME ALERTS

- Reviews Cognos environment continuously
- Notifies you of unfavorable conditions
- Isolates events and time periods that led to the disruption

IMMEDIATE ISSUE INSIGHT

- Aligns Cognos behavior and infrastructure into one timeline
- Insight into reports and users impacted
- Convert impacted period to load and stress test to rerun events

DISCERN PERFORMANCE

- Set business baselines
- Replay captured Cognos user activity exactly as it happened at the disruption
- Comprehension of results: compare configuration before/after remediation
- Apply method for CQM to DQM, DWH, and other data source changes, upgrade Cognos, and migrate to the cloud
