Integration With:

The latest Gitoqlok release features the **QSDA Pro** Integration.

Gitoqlok integrates with **Soterre**, leveraging its APIs to fetch metadata about QVD files.

Gitoqlok integrates with **Open AI** API to enhance and augment your Qlik Sense development experience.

Diff Viewer: See two panel sheet versions to facilitate easy comparisons between them

Sheets Comparator: Highlights sheet changes

Global Search: Enable cross-name searching for Qlik apps, measures, and expressions

Application Checklist: Ensure the highest performance standards before releasing apps to production

Security Rules Manager: Lets you rollback a particular security rule

Load-Script Sharing & Import: Enables instant comparison and editing of different Load-Script versions

Business Glossary: View relevant terms in your current Qlik app

Sheets Thumbnail Assistant: Quickly change the cover of your sheet

Time Machine: View different app versions by toggling the time machine bar back and forth

Dark Theme: Choose the way you want to work

QVD Lineage: Shows regions and destinations of QVD files in the side panel

Collision Detected: Monitor app copies, ensuring accuracy by detecting and managing development conflicts

Bookmark Migration: Easily move app bookmarks between Qlik servers

Detect Unused Master Items: Highlights unused master items to keep track of available resources

Environment Migration: Backup all QMC objects

Tags Manager: Controls the intention of Qlik Sense sheets to be published in Qlik Cloud

QVD Links: Helps open an application that generates a QVD file instantly

Task Chain: Compare task flows relative to the current ETL app using a tree diagram view
