## Enhance your Qlik environment for accelerated, safer development

As Qlik environments grow, maintaining clarity becomes harder. Apps evolve quickly, teams change, and understanding how everything fits together becomes increasingly difficult. Without reliable visibility, everyday development requires more validation, more coordination, and more time identifying root cause.

With zero-touch version control and App Analytics, Soterre for Qlik brings app structure, usage, and change history together in one place, while AI provides context during development and delivers insight into deployment. When integrated with QSDA Pro, early indicators of performance and design issues surface sooner, helping teams work with greater confidence, maintain continuity as responsibilities shift, and improve apps without unnecessary rework.

### AUTOMATIC CHANGE TRACKING

- ✓ Zero-touch version control
- ✓ Instant object-level rollback
- ✓ Visual diff of sheets and merge versions

### DATA DRIVEN DEVELOPMENT

- ✓ Use app metadata presented inside Qlik
- ✓ Identify usage patterns to understand impact
- ✓ Summarize app context with DevOps intelligence

### LONG-TERM UNDERSTANDING

- ✓ Clear understanding of app behavior over time
- ✓ Reduce the risk of knowledge loss as teams change
- ✓ Faster onboarding with lasting understanding
